Co-funded by the European Union

The EnterSTEAM project aims to enhance VET quality by aligning it with socio-economic needs and fostering collaboration between private and public stakeholders for demand-driven solutions. By integrating Science, Technology, Engineering, Arts and Mathematics methods, it promotes innovation, inclusivity and entrepreneurship.
The project will equip educators with practical strategies, seeking to advance gender equality in science and expand lifelong learning opportunities, contributing to a skilled and equitable workforce.

Budapest: a week of STEAM in action

From 5 to 9 October 2026, students from across the EnterSTEAM partnership met in Budapest for a Learning, Teaching and Training Activity hosted by our Hungarian partner, the Ganz Ábrahám Bilingual Secondary and Vocational School. Each partner country was represented by six students. They spent the week learning together outside the usual classroom walls.

Technology met creativity in hands-on sessions on 3D printing and robotics. The city's history and art became a learning space, explored both on foot and through virtual reality.
Most of all, it was a meeting of cultures: young people from different countries sharing ideas, perspectives and friendships, discovering how much they can build together.

The EnterSTEAM Savvy Tech Toolkit and the Digital Toolkit are now available!!

The **Savvy Tech Toolkit** offers 19 hands-on STEAM activities built on the 5E learning model, each with objectives, step-by-step guidance, materials and assessment tools. Available in seven languages.
The **Digital Toolkit** for STEAM Education presents 58 selected digital tools, from coding and robotics to 3D design, AI and virtual labs.

What's next?

A new Learning, Teaching and Training Activity in Valmiera, Latvia, will bring together another group of students from the partnership.
Meanwhile, pilots and Multiplier Events are under way across the partner countries.
